

Producers in high pH or alkaline soil environments may experience iron chlorosis in their crops. MicroLink Iron HPH is a safe and effective iron nutrient product that safely and flexibly delivers iron nutrition in a form usable in these environments. This product's mixability with other nutrient products and crop protection products allows for application flexibility, and AgroLiquid's reliable manufacturing and use of high-quality materials assures a consistent, effective product.

AgroLiquid's secondary- and micro-nutrient products can be economically added to your planter-time fertilizer program to prevent yield robbing deficiencies. Accurate soil testing is a great preventative tool. But, if in-season deficiencies are discovered, our micros can also effectively be foliar applied.

*MicroLink Iron HPH is intended for use in soil pHs over 7.5 where Iron Deficiency Chlorosis (IDC) issues are most likely to occur.*
